

- a. What changes were needed to be made in the RESTCONF request to delete the interface?

tendríamos que cambiar la configuración que se envía, en este caso

```
{
  "ietf-interfaces:interface": {
    "name": "Loopback99",
    "type": "iana-if-type:softwareLoopback",
    "enabled": true,
    "ietf-ip:ipv4": {
      "address": [
        {
          "ip": "99.99.99.99",
          "netmask": "255.255.255.0"
        }
      ]
    },
    "ietf-ip:ipv6": {
    }
  }
}
```

cambiar la parte de loopback 99

```
{
  "ietf-interfaces:interface": {
    "name": "Loopback99",
    "type": "iana-if-type:softwareLoopback",
    "enabled": false,
    "ietf-ip:ipv4": {
      "address": [
        {
        }
      ]
    },
    "ietf-ip:ipv6": {
    }
  }
}
```
